

Online Symposium

Innovation for pandemic preparedness: public or private responsibility?

**22 September 2021
18:00-20:00**

Speakers:

Prof. dr. Marion Koopmans, Erasmus MC
Prof. dr. Sarah Gilbert, University of Oxford
**Prof. dr. Matthias Barz, Leiden Academic
Center For Drug Research**
**Prof. dr. Hanneke Schuitemaker, Janssen
Vaccines & Prevention BV**

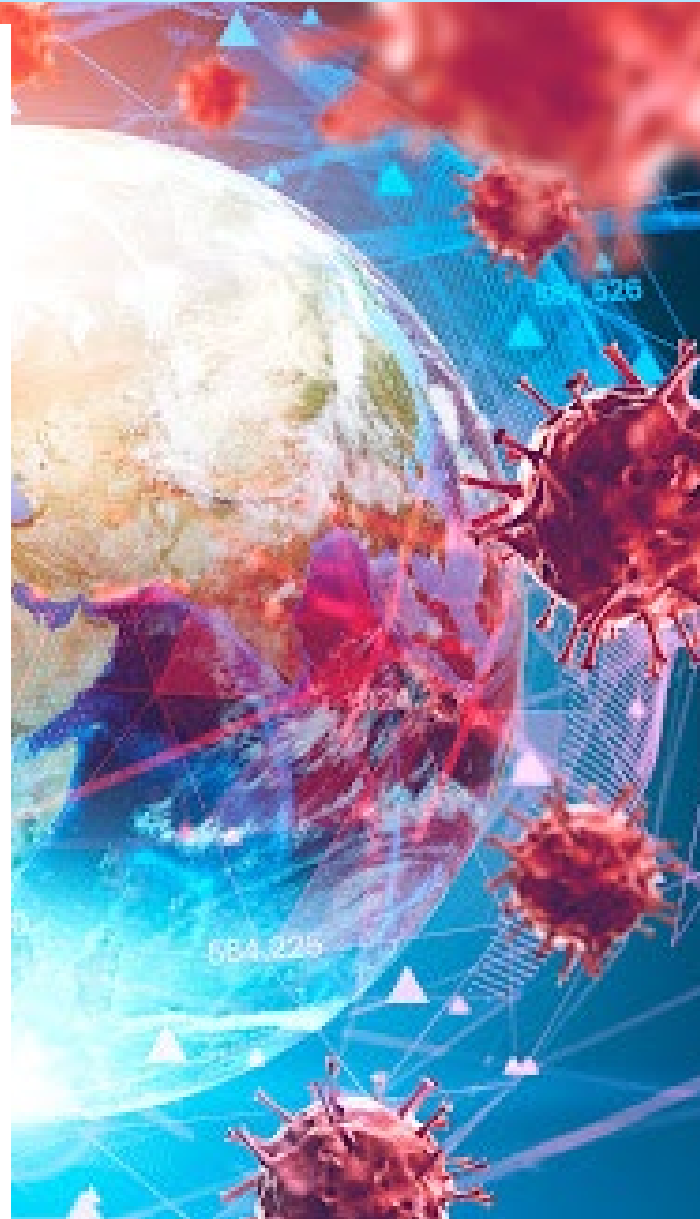

The unprecedented development of vaccines to mitigate the loss of lives due to the pandemic has once more underlined the importance of scientific innovation in our society. Looking ahead, we need to discuss the lessons learned from the COVID-19 pandemic and appreciate the contribution of different players in the field of biomedical infectious diseases innovation.

Given the sheer impact of a pandemic on society, we share a responsibility to improve innovation processes in order to maximized speed and output. Both public and private partners have played an important role in innovation throughout the pandemic. What is the division of responsibility between public and private partners? How has corporate responsibility played a role? What is the business model for preparedness for a next pandemic? How to best invest to improve preparedness?

Four keynote speakers will introduce their experiences and view on responsibility towards pandemic preparedness, after which viewpoints will be discussed in a round table session hosted by LUMC and LBSP.

Attendance will be through ZOOM, discussion points may be raised in the chat.

You can register for this symposium by sending an email to:
